

## SportsArt cardio installed at Carshalton Boys Sports College

Designated as a Specialist Sports College, the Carshalton Boys Sports College selected and installed SportsArt Cardio fitness training equipment after comparing several tender options.

The Carshalton Boys Sports College was looking to invest in new cardio fitness equipment for its Healthy Living Unit and invited a number of fitness equipment suppliers to quote for the purchase of four of each cardio training units - treadmills, elliptical, upright bikes and rowers. Selection of the right products was essential as the facility would be used by all year groups plus staff, and had therefore to be reliable, simple to operate and maintain.

The school reported that after viewing SportsArt fitness equipment first hand, they were impressed by the aesthetic quality of the design and its robust construction. The units also looked very high-tech but in reality, the visual displays were very clear and controls user-friendly.

SportsArt was awarded the contract as they were competitive, enthusiastic and could also demonstrate success with many reference installations in other educational establishments. Also, being a manufacturer as opposed to just a supplier, plus the comprehensive warranty on all fitness equipment installed, this gave the school the confidence to commitment to SportsArt.

The Carshalton Boys Sports College stated that the SportsArt cardio equipment has contributed to a professional sports environment, with state of the art fitness stations encouraging students to whole heartedly take part in exercise and sport. Since installation, the pupils and staff have reacted very favourably to SportsArt fitness equipment and can only report our dealings with SportsArt Fitness UK to be first class!
